

QUEENS MEDICAL CENTRE NOTTINGHAM

PROJECT PROFILE

“ The dedicated team at Mansfield Pollard went above & beyond to ensure deadlines were met ”

Paul Wiseman- Operations Director,
Nigel Smith Plumbing & Mechanical Services Ltd

CHALLENGES:

To design, manufacture, deliver, install and commission fully compliant **HTM-03** specification air handling units to serve the new Angioplasty ward at Queens Medical Centre, Nottingham.

With a timescale of just **four weeks**, and additional challenges of extremely **limited plant space** and significant **access restrictions** on-site, this project tested our flexible and dedicated engineers to the limit

OUR SOLUTION:

Our expert air handling engineers designed **customised units** to fit around existing services and plant in the basement.

A **flat pack** manufacture process and full assembly on-site resolved the issue of access restrictions and our acoustic engineers designed an **attenuation system** to satisfy the noise specification requirements.

A **partnership approach** with both the end user and main contractor was essential to ensure a working operating theatre two days after the planned commissioning date.
